**Read the following passage and answer the questions given:**

From the 1920s onwards, we also find an increasingly active engagement of women in the freedom struggle. Much has been said – and with justice – about the co-option of women’s struggle for subjectivity into the nationalist agenda. Yet our analysis would remain simplistic if we do not admit that the increasing active participation of women in these nation – wide movements was changing the parameters of man-woman relationship both within the movement and in society in general in subtle and indirect ways. It was also making dents in the ideological boundaries within which the consciousness of the middle class woman traditionally operated. The experience of participating in the Non-cooperation Movement and courting arrest involved a perception of oneself that did not tally with traditionally – constructed self – images. Then again when women, in their contact with armed revolutionaries, graduated from the role of giving shelter and hiding arms to that of participating in or even leading armed action, they had to breach very stiff barriers of conventional behaviour. There is no doubt that the strategies of the armed revolutionaries imposed severe control over women’s sexuality and that the ultimate leadership in armed struggle remained with the men. Yet it cannot be denied that this participation demanded that women should create new roles for themselves and in doing so should transgress norms of gender and class relationship. This process became more pronounced when women joined mass-movements organized by the Leftist forces.
