Read the following passage and answer the questions given:

Education and ambition by themselves would have taken people nowhere without an expanding economy. Perhaps, even, the expanding economy explained the shift in Indian education. For Pravas, an engineer, the expansion had started some time before independence, when the old British emphasis on law and order (especially after the Indian Mutiny of 1857) had been modified by the idea of development.

Many people were sucked into that process. There was an explosive growth in India around 1930. It built momentum around 1947, had a big growth thereafter, and is now slowing down. In 1962, when I was thinking of universities and a career, I had a choice of professions and institutions. People today have to struggle hard. But these things have a positive side.

‘The average aspiration of the Indian is to grow under a shadow-and this is all right as long as someone else throws the shadow. In concrete terms, this means you look for employment, you try to get into structures created by other people. That’s how we got governed in the first place. The attitude is “As long as the local environment is the same, I don’t care who is running things at the top”. I read something in a paper some time ago. It was to the effect that, before the British came to India, the Indians were like bees in a garden. And that’s fine as long as someone else looked after the garden. And of course the Britishers became both the owners of the garden and the gardeners, the *malis* – with those other guys, the bees, going happily from flower to flower’.

‘What about the positive side of the struggle today?’

‘That shadow area I talked about is becoming congested now. It is forcing people to go out on their own. It is forcing them to be entrepreneurial.’
